PROFESSIONAL INVENTORY USAGE

Tools > Reports > Inventory > Professional Inventory Usage

The Professional Inventory Usage report displays a detailed a breakdown of professional products used by the business, organized in a way that allows you to easily view particular companies and lines. The report includes the quantity, average product cost, and total product cost for each item, as well as the total figures for each line and company. The first page of the report displays the total quantity, average cost, and total cost for all products that were used professionally during the given time frame. This report will help you identify trends in professional product demand, which will assist with future re-orders.

## QUANTITY

This is the number of items that were used by the business. If you drill into the report, this is shown for each transaction.

## AVERAGE PRODUCT COST

 When an order containing this item is received, the average cost is calculated based on the average cost method:= (Previous value of inventory on hand + Total order cost ex-tax) / (Previous aty of inventory + Total order qty)
